

Cardi-OH Update

NATIONAL DIABETES MONTH

The Ohio Cardiovascular & Diabetes Health Collaborative (Cardi-OH) recognizes November as National Diabetes Month, an opportunity to shine a light on one of the most common chronic diseases impacting Ohioans.

Diabetes by the Numbers

36.2%

of adults in Ohio (3.3 million) have diabetes or prediabetes.

Nearly one million adults in Ohio (11.1%) have diabetes and an additional 300,000 (3.3%) have diabetes but are unaware. Ohio's rates exceed the national average of 9.9%. The rates of prediabetes in Ohio are equally staggering: 700,000 adults (7.5%) have prediabetes and an additional 1.3 million (14.3%) have prediabetes but are unaware.

As we aim for equitable and improved health for all Ohioans, diabetes prevalence is even higher among adult Medicaid beneficiaries, 1.45 million adults (16%), pointing to significant disparities that must be addressed.
